

STATISTICS

GDP BY INDUSTRY

2000

Total Yukon GDP by Industry, 2000 ————— \$1,033,100,000

Growth Rate from 1999 to 2000 ————— 0.6%

2000 Highlights

The GDP rose 0.6% in the Yukon, after edging up 0.2% in 1999. These modest annual increases follow substantial declines in the previous two years, since the Faro lead-zinc mine closed in 1997 and related operations were subsequently scaled back. In 2000, production in the mining industry was reduced 9.3%, as low world prices resulted in the closure of two gold mines. Government expenditure provided a lift to the Yukon economy, as spending on health, education and administration posted gains. Increased construction investment on schools and health care facilities was also a source of strength.

Real Gross Domestic Product by Industry, 1997-2000*
(millions of 1997 dollars)

	1997	1998	1999	2000
Agriculture, Forestry, Fishing and Hunting	5.8	5.2	5.8	5.5
Crop and animal production	1.2	1.4	1.4	1.4
Forestry and logging	4.2	3.6	4.2	3.8
Fishing, hunting and trapping	0.3	0.3	0.2	0.2
Support activities for agriculture and forestry	0.1	0.1	0.1	0.1
Mining and Oil and Gas Extraction	129.9	107.6	70.0	63.5
Oil and gas extraction	10.5	11.6	17.0	15.5

**Yukon's Real GDP by Industry,
as a percentage of Canada's Total Real GDP by Industry**

2 + 9 # 1 3 5 96 4 > 0 - 2 1 0 1

This analytical report presents Statistics Canada's latest estimates of Yukon's Gross Domestic Product (GDP) by industry in constant (inflation-adjusted) dollars for 1997-2000 and in current (not adjusted for inflation) dollars for 1997-1998. The figures should be considered preliminary and subject to revision.

The estimates contained in this publication are produced by Statistics Canada's Industry Measures and Analysis Division, and are not fully reconciled with the overall provincial/territorial GDP figures produced by Statistics Canada's National Accounts and Environment Division. While the general concepts followed in compiling these estimates are consistent with those underlying the Provincial/Territorial Income and Expenditure Accounts, there still remain some statistical differences between the two sets of estimates. Statistics Canada continues to give priority to statistical integration and a narrowing of the differences.

Note on the definition of the Public Administration Industry:

Economic units (companies or establishments) are classified together in the same industry if they are engaged in the same or a similar kind of economic activity. The industrial grouping does not depend upon whether the activity is carried on by a government agency or by a business enterprise. Because so much of the activity commonly understood as 'government' is reallocated and assigned to its related industrial group in the industrial distribution, the 'Public Administration' industry shown in these tables provides a limited view of the full range of government activity. It includes only those establishments of government which clearly do not belong to any other branch of economic activity, but which are essentially concerned with general administration, the internal service agencies of the public sector, and defense.

Note to readers: Real GDP has been rebased from 1992 prices to 1997 prices. Business and government expenditures on software, which were treated as current expenses, have become capital expenditures. This has had the effect of raising the level of provincial GDP from 1981 to the present. The 1980 Standard Industrial Classification (SIC) has been replaced with the 1997 North American Industrial Classification System (NAICS). Provincial estimates of GDP at basic prices are available from 1997 for 100 industries. Data spanning 1984 to 1996 will be available for 2002. For more information, please consult Statistics Canada's Web site (www.statcan.ca).
